

# HAZ-ID

GHS Chemical Hazard Identification System  
Système d'identification pour les produits chimiques

## The Smart way to Safely Store your Chemicals.

New for 2017, our HAZ-ID identifier is now GHS compliant! Now standard on all Nosredna <FM> Approved & ULC Listed Safety Storage Cabinets.

GHS stands for the Globally Harmonized System of Classification and Labeling of Chemicals. GHS defines and classifies the hazards of chemical products, and communicates health and safety information on labels and safety data sheets. The goal is that the same set of rules for classifying hazards, and the same format and content for labels and material safety data sheets (MSDS) will be adopted and used around the world.

An international team of hazard communication experts developed GHS.

Our new identifier comes complete with all GHS symbols. The label is die cut which allows our users to remove the symbols that do not apply to your specific storage hazards by simply peeling the symbols off the label. Always reference the specific chemical MSDS prior for correct WHMIS symbols. Replacement labels are also available for individual ordering.
