FIRST AID KIT, DEFIBRILLATOR, EYEWASH

INSTALLATION • INSPECTION • TESTING

OUR HISTORY

Established in 1908, Herbert Williams Fire Protection was founded by Herbert Williams II as one of the first fire protection service providers in the history of the City of Toronto. The company was formed shortly after “The Great Fire of 1904” which destroyed 104 buildings in the city’s downtown core, and as a result, more stringent fire safety laws were introduced including the expansion of the city’s fire department. In the early nineteen hundreds the primary fire protection service was the monthly servicing of water-filled wall-mounted fire buckets and the supply and repair of horse drawn pumper trucks. As years passed the landscape of fire protection continued to change with the introduction of the very first water pump style fire extinguisher. In the mid 1920’s the fire extinguisher evolved into the self pressurizing soda acid foam, and eventually to Carbon Dioxide and stored pressure dry chemical extinguishers similar to what are still used today. After the late 1930’s base building standpipe systems and fire sprinkler systems were introduced and along with them early warning fire alarm systems, pre-action fire sprinklers systems, and restaurant fire suppression systems in the early 1960’s.

As you can see fire protection has evolved since our Company’s inception and the needs of our customers has evolved along with it, as did our services. Today we are very proud of our heritage and our ability to keep pace with the continuing advancements in fire protection technology including complex base building systems. This is why we pride ourselves on quality services to our customers and the ability to understand the unique needs of every one of our customers.
